Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and ExcRY sites of the pCMVSFORT 6 vector. Library was not normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster 7021.f For more information about this cluster 7021.f For more information about this cluster 7021.f FATURES Source In 1060

Ist strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and Econ V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen. This sequence belongs to sequence cluster

/note="Organ: Stomach; Vector: pT218RP1; Site_1: EcoR1;
Site_2: Not1; The poly (A)+ RNA was dephosphorylated with bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped incer mRNA was ligated with DNA-RNA linker including EcoR is site by treatment of T4 RNA ligase and the first strand I site by treatment of T4 RNA ligase and the first strand I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was adjusted to a DNA strand by Okayama-Berg method. The converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Toplof' by electroporation method. The cDNA libraries constructed by this method are full-length enriched CDNA library."

The invention relates to constitutively active, non-endogenous versions of endogenous human orphan G protein-coupled receptors (GPCRs, AAY90643-AAY90677 and AAAY90677 and AAAY90677 and AAAY90677 and AAAY9079). The mutant proteins of the invention contain a mutation in a portion of the protein comprising intracellular loop 3 (TC3) and transmembrane domain 6 (TM6). A non-endogenous amino acid, X, is substituted for an endogenous proline in IC3 at a position 16 amino acids N-terminal of an endogenous proline in IM6 to form a sequence X-C (AA)15-Pro. The endogenous amino acid is selected from Lys, His, Arg or Ala, and is preferably Lys when the endogenous residue at this position is Lys, this residue is replaced by His, Arg or preferably Ala. The 15 amino acid stretch between the substituted amino acid and the Pro may be condepended in the constitutively active GPCRs are useful for identifying antagonists, agonists and partial agonists for use as pharmaceutical agonists for a particular GPCR are useful for reating diseases and discassed conditions. Antagonists for a particular GPCR are useful for reating diseases and discassed with that receptors in normal and diseases and discassed with the receptor. Because the novel mutant GPCR are constitutively active, they can be used directly for screening of compounds without the red for an best useful for the present sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino caids. Also described: (1) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or articly for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigenic peptides for GPCRs are useful in detecting an antibodies. The peptides and antibodies are also useful for detecting the presence or absence of corresponding GPCRs—The, antigenic peptides for GPCRs and antibodies are useful for detecting the presence or absence of corresponding GPCRs—The, antigenic peptides for GPCRs and antibodies are useful for detecting the presence or absence of corresponding GPCRs—The, antigenic peptides for GPCRs and antibodies are useful for detecting the presence or absence of corresponding GPCRs—The, antigenic peptides for GPCRs and antibodies are useful for detecting the regeneration-related disease, fimmunological-related call proliferative disease, or autoimmune diseases, eg. ALDS, Alzheimer's disease, corrections and acute inflammation, allergies, Crobn's disease, parkinson's disease, multiple sclerosis, pain, psoriasis, corrections or viral inflammation, allergies, Crobn's disease, pain, psoriasis, concertions or propersion, renal disorders, rheumatoid arthritis, trauma, ulcers, or any other disorder in which GPCRs are involved. The antibodies may be used in immunoassays and immunodiagnosis ABZ422859 encode GPCR proteins given in ABP81018, which are used in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

```
The invention relates to an isolated HGPRBMYS polypeptide. The polypeptides, polynucleotides and methods are useful for preventing, treating or ameliorating medical condition such as a neoplastic disorder e.g. bulkaemia and breast cancer; immune disorder e.g. AIDS and rheumatoid arthritis; neuronal disorder e.g. Alzheimer's disease and parkinson's disease; respiratory disorder e.g. bronchopulmonary disease and pancoast's syndrome; ovarian disorder e.g. ovarian carcinoma and meig's syndrome; colon disease; breast disease; thalamus related disorder; amygdala related disorder; corpus callosum related disorder; caudate nucleus related disorder; hippocampus related disorder by administering the GPCR polypeptide or its homologue. The present sequence represents the amino acid sequence of a G-protein coupled receptor used to show homology with the human G-protein coupled receptor, HGPCRBMY
                                                                                                                                                                                                                                                                                                                     New G-protein coupled receptor polypeptides, designated as HGPRBMYS, useful for preventing. treating or ameliorating a medical condition related to the coloh, preast, ovaries or immune system.
                                                                                                                                                                                                                                                                                                                                                                                            Disclosure, Fig 87 93pp; English

constitutively active version of an endogenous human gracellus.

Interintorly active version of an endogenous human gracellus.

Intracellular-3 (IC3) region, by substituting a specific amino acid in the TW6 region with a different amino acid, and testing for constitutive cativity. The method is useful for creating a constitutively active version of an endogenous human GPCR that comprises a transmembrane 6 region and an intracellular loop 3 region. The altered human GPCR polypeptides are useful for screening test compounds for identification of inverse agonists or partial agonists of GPCR polypeptides, which may have therapeutic uses. The altered GPCR may also be used in vivo or in vitro in biological research. A nucleic acid encoding the altered GPCR may be used to create a transgenic animal expressing the altered GPCR in may be used to create a transgenic animal expressing the altered GPCR human G protein-coupled receptor without the need for provision of a human G protein-coupled receptor without the need for provision of a creening of compounds that modulate the activity of a human G protein-coupled receptor without the need for provision of a screening of compounds against orphan receptors for which no ligand is currently known. This sequence represents a human GPCR polypeptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      61 PSNLSVFTSYLDLSMINISQLLPNPLPSLRFLEELRLAGNALTYIPKGAFTGLYSLKVLM 120

polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Ching), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                   120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                        ō
injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes a new isolated polypeptide comprising: a polypeptide or its mature form comprising a sequence not given in the specification; or a variant of (A), where one or more amino acid residues in the variant differs in no more than 15% from the amino acid sequence of the mature form. The pharmaceutical composition may be administered via oral, transdermal, rectal or parenteral route. The polypeptide, nucleic acid or antibody is useful for preparing a composition for treating or preventing a NOVX-associated disorder, e.g., cancer. This is the amino acid sequence of a transmembrane receptor homologue used in a comparison with the novel human proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                               The invention relates to a constitutively active, non-endogenous version of an endogenous human G protein-coupled receptor (GPCR). The GPCR is used for screening therapeutic compounds as inverse agonists, agonists or partial agonists. The GPCR can be also be used to elucidate and understand the roles of GPCRs in normal and diseased humans. The GPCR need not be purified and isolated to be used to screen for therapeutic compounds. The utility of the GPCR as a research tool is enhanced because the role of a particular receptor can be understood before the endogenous ligand is identified. The present sequence is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                  ઠ
                                                                                                                                                                                                                                 The invention relates to nucleic acids and proteins (ADN38683-ADN40064) whose expression is upregulated or downregulated in specific cancers or other diseases such as angiogenic or fibrotic disorders, and to methods of determining the presence or absence of a pathological cell in a patient by detecting a nucleic acid at least 80% identical to those of the invention or by detecting a polypeptide of the invention. The invention also relates to expression vectors and host cells comprising a nucleic acid of the invention; antibodies which specifically bind a polypeptide of the invention; antibodies which specifically bind a polypeptide of the invention; antibodies of activity or expression of the polypeptides and nucleic acids. The nucleic acids, polypeptides, antibodies are useful for diagnosing, prognosing and treating cancer and other conditions such as psoriasis, ischaemia, heart disease,
